Experience

Founder / Full-Stack Engineer — Plink

2026 – Present

Architected and developed a full-stack React and TypeScript application backed by Supabase and PostgreSQL, with realtime state synchronization, authentication, subscription billing and analytics. Implemented cross-platform delivery with Capacitor alongside subscription billing through Stripe and Apple IAP, while owning database design, backend logic, deployment and ongoing product development.

React Supabase Capacitor Stripe Apple IAP PostgreSQL Playwright

Mobile / Full-Stack Engineer — Hecate

2026 – Present

Engineered a mobile-first React and TypeScript application using Capacitor, Supabase and Apple MapKit JS. Implemented continuous geolocation tracking, persistent map-state updates, location-based interactions and backend synchronization, while managing mobile builds, native configuration and App Store distribution.

React Vitest TypeScript Supabase MapKit JS Geolocation

Frontend Developer — Giosg

2024 – 2026

Led frontend development across multiple production SaaS products using React and TypeScript, with a strong focus on integrating AI-powered conversational experiences into customer-facing workflows. Designed reusable UI architecture, AI chat interfaces, embedded cross-origin experiences and knowledge-driven agent workflows, while improving reliability through automated testing and modern frontend tooling.

React TailwindCSS Storybook Playwright TanStack Query Jest

Full-Stack Developer — Athlos Travel

2023 – 2024

Engineered a production booking, travel and event-management platform used by professional sports organizations, including FC Barcelona. Developed frontend architecture with React, backend services and REST APIs with NestJS, PostgreSQL data models, and AWS-based deployment workflows supporting booking, ticketing and operational processes

NextJS NestJS REST APIs AWS Chakra UI PostgreSQL

Selected Projects

Notch Prompter — Native macOS App github.com/gimpoco1/notch-prompter

Developed a native macOS teleprompter in Swift designed around the MacBook display notch, with a lightweight interface focused on unobtrusive script reading during presentations and recordings.

AI Jeopardy Quiz — AI-Powered Web Application ai-jeopardy-quiz.vercel.app

Developed an AI-powered quiz generation application integrating OpenAI API to dynamically create questions and adapt quiz difficulty based on user interaction. Implemented structured LLM outputs and application logic to transform generated content into interactive quiz experiences.

Educations

Full-Stack Software Engineering Bootcamp

Codeworks - 2023

High school diploma in Foreign Languages

Liceo Linguistico G. Mazzini

Skills

- React
- TypeScript
- REST APIs
- Next.js
- AWS
- LLM Integration
- PostgreSQL
- Playwright
- Storybook
- OpenAI API
- Webpack
- CI/CD
- Tailwind CSS
- Capacitor
- Swift
- Git
